

# Stock Sharing Across a Multi-Site Trust

Susan Mitchell

Chief BMS

Blood Transfusion, William Harvey  
Hospital

# Why did we start?

- Wastage was not good as a trust
- One of my first remits as a senior BMS in BT was to look at reducing wastage
- I had done some cross site working so saw stock sharing as a real prospect
- We had done this in emergencies so there was a precedent

# Why do we do it?

- One trust, 3 sites with BT labs
- Collaborative working
- One site holds more O Neg so sharing stock helps reduce wastage of this finite resource
- Keep wastage down
- Established transport for moving stocks

# How do we do it?

- Holding emergency stock platelets on two sites and moving between sites
- Transfusion Stock PTL- real time cross site stock updates- short dated units highlighted in red
- Can also list short dated stock on the XM bench
- When moving stock during the day we use existing transport runs- no additional costs
- Use SERV to move products in emergencies

# Some Logistics

- Single LIMS, allows us to transfer units electronically to the stock locations on other sites
- This means units do not have to be booked in on arrival
- All sites use the same paperwork and validated transport boxes
- Full audit trail available

# Stock movement Figures From BSMS

- Period Covers January-October 2022
- WHH to QEQM- 65 units Rbc's
- WHH to K&CH- 40 units Rbc's
- We have also moved 68 packs of platelets to QEQM and K&CH in that time. Some have time expired but far fewer than if we did not share them

# Stock Sharing Outside the Trust

- SLA with BMI Chaucer & K&CH
- Exchange of short dated units with K&CH
- There is also an SLA to supply blood and plasma should the need arise for a major haemorrhage
